

Lead Self Domain Assignment (Part 1)

How might your awareness of your personal values and their influence change your approach to decision-making when working with others?

Becoming truly aware of my core values—specifically accountability, fairness, and compassion—has been a turning point for me. It shifted my decision-making from a reactive process into a deliberate practice. In the fast-paced environment of a community pharmacy, it is easy to let immediate pressures, like a long queue or a stressed team, dictate actions. However, knowing that accountability is my anchor allows me to pause in these moments. When I face pressure to rush a technical check, this value acts as a mental stop-sign, reminding me that patient safety must always take precedence over speed.

Furthermore, embracing fairness and compassion has changed how I interact with the assistants I supervise. Previously, I might have viewed a dispensing error strictly as a performance failure. Now, I look at it through the lens of fairness, prompting me to ask if the system supported them or if there were gaps in training. This ensures that my guidance is educational rather than punitive.

By explicitly linking my decisions to these values, I can explain the "why" behind my actions more effectively. Instead of just saying "no" to a request, I can articulate that the decision is rooted in a commitment to integrity. This invites the team to align with those standards rather than feeling personally critiqued, ensuring my leadership is consistent and genuinely respected.

Lead Self Domain Assignment (Part 2)

Johari Window Summary:

- Public (Open) Quadrant: Reliability.
- Hidden Quadrant: Compassion.

Self-development plan

Goal & Johari Source	SMART Goal Statement	Action Plan (Steps to Achieve)	Evidence of Success (Measurement)
Goal 1: Strengthen Reliability <i>(Public/Open Quadrant)</i>	Maintain 100% accuracy in technical checks during peak dispensary hours (12:00 PM – 5:00 PM) over the next 4 weeks by implementing a mandatory "5-Second Safety Pause" before every final verification.	1. The Trigger: When I pick up a basket to check, I will physically take my hand off the mouse for 5 seconds to reset my focus. 2. The Environment: I will maintain a strictly clutter-free workstation to minimize visual distractions. I will enforce a "One Thing at a Time" approach, ensuring only one basket is on the counter during verification.	Tally Sheet: Keeping a simple log of "distracted moments" vs. "successful pauses" at the end of each shift to ensure the habit is sticking.

Goal 2: Externalize Compassion <i>(Hidden Quadrant)</i>	Transition compassion from an internal feeling to an observable behavior by initiating at least one specific "wellness check-in" with a pharmacy assistant during every shift for the next month.	1. The Script: Instead of only speaking about tasks, I will ask specific questions like, "How are you handling the pace today?" or "Do you need a quick breather?" 2. The Shift: Consciously moving my focus from task completion to team well-being during high-stress moments.	Self-Reflection Log: A daily Yes/No check-in after each shift: "Did I ask a personal or supportive question today?"
Goal 3: Apply Compassionate Fairness <i>(Hidden Quadrant)</i>	Change my response to dispensing errors from "correction-focused" to "root-cause focused" by using a standardized "System-First" questioning technique for 100% of errors detected over the next 6 weeks.	1. The Question: When I find an error, my first question will be "Did the workflow make this confusing?" rather than "Why did you do this?" 2. The Intent: Explicitly stating to the staff member that I am looking for system flaws, not personal failures.	Engagement Tracker: Noting if the staff member engages in a conversation about the fix (Success) or just quietly corrects it and walks away (Needs Improvement).
