

A top-down view of a grey desk with various medical and study items. A silver laptop is open, displaying a website. A stethoscope lies above it. To the left is a spiral-bound notebook with a black pen. To the right are a pair of glasses and a black smartphone. In the bottom left corner is a white coffee cup. A large white pill-shaped graphic is centered over the laptop, containing the text 'PharmAchieve' and 'PREPARING FOR MCQ & OSCE'. Below this is a pink bar with the text 'Qualifying Exam Preparatory Course'. A faint watermark 'Licensed to Shreyash Shunke' is visible diagonally across the image.

PREPARING FOR MCQ & OSCE

Qualifying Exam Preparatory Course

STRATEGIES FOR SUCCESS

- 1 Study the blueprint, not just the notes
- 2 Practice questions and scenarios early and often
- 3 Learn to eliminate distractors in a case
- 4 Think like a pharmacist
- 5 Simulate exam conditions
- 6 Review mistakes thoroughly

COMMON MISTAKES

- 1 Not utilizing the strengths and weakness wheel for MCQ
- 2 Preparing for both exams in the same way
- 3 Delaying OSCE preparations to the last minute (to focus on MCQ preparation)
 - OR practising inconsistently for the OSCE
- 4 Focusing too much on memorization and test scores
- 5 Not reviewing your weak areas honestly
- 6 Rushing to a recommendation without a full assessment
- 7 Poor time management during revision and the exams

HOW TO MANAGE YOUR TIME

Consistency is key!

- Create an individualized study plan that includes both exams
- Use OSCE preparation as a break from studying from MCQ
- Practice OSCE cases relevant to topics you are reviewing in MCQ

Sample study plan:

Time	Topic
8:30 AM – 9 AM	Practice calculations
9 AM – 11 AM	Review diabetes management
11 AM – 11:30 AM	2 OSCE cases on diabetes
11:30 AM – ~12 PM	Personal time
12 PM – 2:30 PM	Diabetes drug charts
2:30 PM – 4 PM	Practice questions and review mistakes
4 PM – 4:30 PM	Review red flags for a minor ailment (if you need a break from diabetes) or practice verbally counselling on a diabetes medication

HOW TO PREVENT BURNOUT

1. Recognize the signs of burnout early

- Lack of motivation or increased procrastination
- Lack of concentration
- Increased irritability
- Increased tendency of bad habits
- Physical signs such as exhaustion that is not improved with sleep, headaches, low mood...etc.

2. Create time for enjoyable and social activities

- Friends & family provide you with a positive support system
- Engage in hobbies
- Add dedicated periods of time into your study schedule

3. Go outside

Already feeling burnout?

- Take breaks if you're feeling unproductive
- Breakdown your study goals into multiple smaller ones if you are feeling overwhelmed (gives you a sense of accomplishment -> motivation)

A GOOD STUDENT VS GREAT STUDENT

A good student

- Highlights and reads lecture materials only
- Focuses on memorization and content coverage
- Practices questions after finishing studying
- Reviews answers but moves on quickly
- Studies hard but reactively
- Feels confident when material looks familiar

A great student

- Trains for the exam and thinks like a licensed pharmacist
- Focuses on application and clinical reasoning
- Uses practice questions as a learning tool
- Carefully analyzes why each answer is right or wrong
- Identifies weak areas early and fixes them
- Prioritizes exam strategy, time management, and pattern recognition

GREAT STUDENT

Strategy

Analysis

Application

Knowledge

Memorization
